Stanford’s Robotic Racecar Learns From Humans

By Andrew Charles

Thursday, 13 April, 2011

Professional racing drivers have long bragged about their ability to learn from experience. Now, a robotic racecar has taken up the challenge and has learned to improve its driving skills by interacting with human drivers. The car is the latest creation of the Stanford Racing Team, which has been developing autonomous vehicles for several years, and it participated in the annual DARPA Grand Challenge in 2007.

According to the team, the new robotic racecar is equipped with sensors that allow it to detect and respond to the movements of human drivers. The car can be controlled by a human driver through a wireless connection, and it uses this input to improve its driving skills. The car’s ability to learn from humans is based on machine learning algorithms that allow it to identify patterns in the driver’s movements and adjust its behavior accordingly.

The team is currently working on a project that involves teaching the robotic racecar to drive on different types of tracks and under various weather conditions. The ultimate goal is to create a fully autonomous racecar that can compete with the best human drivers.

MICROSOFT'S METRO MODE REVEALED!

In a surprise move, Microsoft has revealed the details of its upcoming Metro OS, which is scheduled to debut later this year. The new operating system will be designed to run on a variety of devices, including smartphones, tablets, and PCs. The Metro interface is said to offer a more intuitive and streamlined user experience than the current Windows 7 operating system.

CUPERTINO, CA - APRIL 19: Microsoft's Metro mode is revealed.

Photos of the Microsoft Metro OS have started to appear on various websites, including the official Microsoft blog. The new operating system is said to offer a more intuitive and streamlined user experience than the current Windows 7 operating system. The Metro interface is designed to be used with a mouse and keyboard, as well as a touch screen.

The new operating system is expected to be available later this year, and it is said to offer a more intuitive and streamlined user experience than the current Windows 7 operating system.
